

ALL-COLOR POWDER COATING, INC.

Experience the All-Color Difference

All-Color Powder Coating offers the best in powder coating services for both metal and MDF projects. With over 150 years of combined powder coating experience, we are able to assist you in every step of the powder coating process. We will be your guide from color selection all the way to having your parts delivered on-time, with one of our trucks.

You may ask yourself why choose powder coating over other coating options? Powder coating looks like liquid paint, but is really much more. Powder coating is tough, attractive, cost effective and environmentally friendly. It is a safer, cleaner alternative that provides a superior finish.

The combination of All-Color's first-class service, knowledgeable, bilingual staff, state-of-the-art equipment and modern facility is what makes All-Color Powder Coating an industry leader and sets us apart from our competition. We are one of the few custom coaters in the United States that is PCI 3000 certified by the Powder Coating Institute for powder application on steel, aluminum and heat sensitive substrates such as MDF. Be sure to work with All-Color Powder Coating on your next project and experience the All-Color difference.

SERVICES

- Metal Coating
 - Automated Processing
 - Batch Processing
- MDF Coating
- Masking
- Assembly & Packaging
- Burn-off & Sand Stripping
- Pre-Treatment & Cleaning
- Sandblasting/Media Blasting
- MDF Machining
- Metal Forming/Fabrication/Welding
- Part Decorating/Graphics
- Pick-up and Delivery

A Powder Coated Tough Finish on All Your Metal Parts

All-Color Powder Coating has been powder coating metal substrates since 1996. With two state-of-the-art, conveyORIZED powder coating lines and a manual batch system, we are able to satisfy all of your powder coating needs. Each line has a multiple stage cleaning and pre-treatment process utilizing R.O. water, to ensure your parts are clean and properly prepared for coating. The powder is applied in a separate environmentally controlled room using Wagner's Bravo Powder Gun technology, giving us the ability to obtain the optimum coating thickness and maintain consistency from order to order.

Our batch system allows us to powder coat parts that are too large or awkward to run on a conveyORIZED powder application line. The batch system can accommodate parts up to 7'6" high, 7'6" wide and 20' in length.

Not only does All-Color stock a wide variety of powders from prominent manufacturers, but we can also custom order powders to meet your specific requirements. The options available in powders today are nearly unlimited. Along with infinite colors, you can choose from a number of textures and glosses to enhance your product.

At All-Color Powder Coating, we work with our customers from the prototyping stage through production in order to provide them with a high quality powder coated part that is cost effective. Our wide range of coating equipment and experienced staff allows us to provide a fast turnaround on both small and high volume jobs.

Powder Coating on MDF and Other Heat Sensitive Substrates

All-Color Powder Coating also provides surface coating for Medium Density Fiberboard (MDF) and other heat sensitive substrates. With a separate production line dedicated to MDF, All-Color uses state-of-the-art infrared ovens manufactured by Vulcan Catalytic, in order to cure the powder while preserving the integrity of the MDF material throughout the entire coating process. All-Color Powder Coating has achieved PCI 3000-H certification for the application of powder coatings onto heat sensitive substrates such as MDF, ensuring a high quality powder coated product with a high degree of customer satisfaction.

Powder coating MDF offers a very durable finish that will protect your product against chips, stains, spills and scratches. Powder coating offers a multitude of colors and textures to finish your product. There are also special powder coatings that offer antimicrobial compounds that combat the growth and migration of bacteria. These are perfect for products used in the medical, food service and childcare industries.

Utilizing powder coating allows you to be more creative with your product designs. Edges are fully coated, eliminating any need for edge banding. The powder coating process creates seamless edges and allows for virtually unlimited design possibilities.

When you design a product using MDF or other heat sensitive materials such as fiberglass or plastic, and are looking for a durable, attractive and environmentally friendly finish, give us a call and we will help you determine if powder coating is right for you.

All-Color Powder Coating takes pride in being a leader in the powder coating industry. We are continually exploring new developments in order to offer the most extensive array of services to our customers. All-Color Powder Coating is one of the few custom coaters that can provide a consistent finish on projects with multiple substrates. If you have specific questions about how powder coating could benefit your company, we encourage you to visit our web site at www.allcolorpowdercoating.com, stop by our facility or contact one of our powder coating experts who is eager to help.
